- This submission contains 'in confidence' material and cannot be loaded on the AOAC website.

Consultation Feedback:

The proposed standards are comprehensive and the Glossary is a useful addition. There are no major issues with the proposed standards, however, two opportunities for improvement are identified for Standard 3:

- Principles of intraprofessional and inter-professional learning and practice are included in 3.10 (f). This statement would be enhanced by including the application of these principles in student professional experience placements.
- Identification and inclusion of educational pathways in pre-registration programs of study in preparation for areas of advanced practice.
